You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance from the basket and the player's position. The ball is shot N times, successfully. You are given an array A containing the distance of a player from basket for N shots. The index of array represents the position of the player.	'b [*]
Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguous subarray of size K from the given array.	3ME
Note:	
* A subarray is a contiguous part of array. * Assume 1 based indexing.	00;
* Assume 1 based indexing.	
* The array contains both negative and positive values.	0
* Assume the player is standing on a cartesian plane. Input Format	RIV
Input Format	
- input1:An integer value N representing the number of shots made by the player - input2: An integer K representing the size of subarray	20,
- input2 : An integer K representing the size of subarray	1/2
- input3 : An array of integers	
Sample Input	age.
2 0 12345	35°
12345 Sample Output	3/2
Sample Output 14	3
